Findings

Branding / Design

The site leverages the MoAD main website branding but employs a number of site-specific page layouts.

The site includes a traditional menu, but no breadcrumb. The site branding includes a search function which redirects to the MoAD main website search. Search results for the *collection* site do not seem to appear in the MoAD main site search.

GovCMS Considerations

The site has the appearance of a database or CMS generated website that is now served statically. Migration of this site to GovCMS would require the objects, places / metadata to be migrated to a GovCMS compatible database and the functionality of the existing site recreated on the new platform.

Accessibility

The branding has a number of accessibility issues (WCAG 2.0 A and AA) which affect the majority of site pages, many of which exist in the MoAD main website branding which is used.

Pages with WCAG 2.0 A issues are unusable for some people, pages with WCAG 2.0 AA issues make it difficult for some people to use the page.

The site does not contain any AGLS Metadata, which is mandatory for all Australian Government Agency Websites.

Responsive Design

The site either does not have a meta viewport specified, or it is configured incorrectly. Viewports are important to ensure that page content resizes appropriately for different devices, in particular mobile and tablet.

There is some text on the site that is small and may not be legible enough for particular users. Some of the links or buttons on the site may be too small for a user to easily tap on a touchscreen.

Broken Links

The site contains a number of internal and external broken links. Internal links include links to pages, images or web artefacts within the current site, whilst external links can include web pages hosted on external sites, scripts / web resources from public repositories and multimedia files hosted on external sites.

Technical Recommendation

If this site is no longer actively maintained, it is a perfect candidate for archiving to a static site and serving the content through the newly agreed approach to handling the museums static websites. There is no anticipated loss of functionality if the site is archived and served statically in future.

	Site Complexity	Functionality	Currency	Delivery	Conclusion
Keep/Make Static	Large / Complex	Out of the Box	Not Updated	Static	Make a Static Website
Move to GovCMS	Small / Simple	Extended	Updated Often	Dynamic
