Findings

Branding / Design

The site employs a number of page layouts across the site and considerable use of HTML5 page elements.

The site includes a traditional menu in addition to contextual in-page menus, but no breadcrumb or search functionality.

GovCMS Considerations

The site is currently served statically (through a middleman site builder export). The design is relatively simple, the complexity will come in the ingestion of the existing page content and in remediating the accessibility issues without affecting the sites functionality.

Accessibility

The branding has a moderate number of accessibility issues (WCAG 2.0 A and AA) which affect the majority of site pages.

Pages with WCAG 2.0 A issues are unusable for some people, pages with WCAG 2.0 AA issues make it difficult for some people to use the page.

The site does not contain any AGLS Metadata, which is mandatory for all Australian Government Agency Websites.

Responsive Design

The site specifies a viewport matching the device's size, allowing it to render appropriately across devices.

Broken Links

The site does not contain any internal or external broken links. Internal links include links to pages, images or web artefacts within the current site, whilst external links can include web pages hosted on external sites, scripts / web resources from public repositories and multimedia files hosted on external sites.

Technical Recommendation

If this site is no longer actively maintained, it is already a static site and should continue to serve the content through the newly agreed approach to handling the museums static websites.

	Site Complexity	Functionality	Currency	Delivery	Conclusion
Keep/Make Static	Large / Complex	Out of the Box	Not Updated	Static	Keep a Static Website
Move to GovCMS	Small / Simple	Extended	Updated Often	Dynamic
