Findings

Branding / Design

The site employs a large number of page layouts across the site.

The site includes a traditional menu but no breadcrumb or search functionality.

GovCMS Considerations

The site contains a large number of pages, and although currently served statically, the content ingestion from the existing site would require considerable effort and validation/testing.

Accessibility

The branding has a number of accessibility issues (WCAG 2.0 A and AA) which affect the majority of site pages.

Pages with WCAG 2.0 A issues are unusable for some people, pages with WCAG 2.0 AA issues make it difficult for some people to use the page.

The site does not contain any AGLS Metadata, which is mandatory for all Australian Government Agency Websites.

Responsive Design

The site either does not have a meta viewport specified, or it is configured incorrectly. Viewports are important to ensure that page content resizes appropriately for different devices, in particular mobile and tablet.

We have not identified a favicon on the site. Favicons are a way to increase brand visibility and make your page more recognizable when browsing amongst multiple browser tabs or bookmarks.

There is some text on the site that is small and may not be legible enough for particular users. Some of the links or buttons on the site may be too small for a user to easily tap on a touchscreen.

Broken Links

The site contains a fairly large number of internal broken links and a small number of external broken links. Internal links include links to pages, images or web artefacts within the current site, whilst external links can include web pages hosted on external sites, scripts / web resources from public repositories and multimedia files hosted on external sites.

Technical Recommendation

The Marnti Warajanga site has a medium complexity rating, due to the volume of pages / content and the large number of page layouts in use across the site.

If this site is no longer actively maintained, it is already a static site and should continue to serve the content through the newly agreed approach to handling the museums static websites.

	Site Complexity	Functionality	Currency	Delivery	Conclusion
Keep/Make Static	Large / Complex	Out of the Box	Not Updated	Static	Keep a Static Website
Move to GovCMS	Small / Simple	Extended	Updated Often	Dynamic
